Subject:	Re: Veritone - Stockton Police Department - Facial Recognition Technology

Hello Captain Rose,

I hope you are great sir. Checking-in once more here. How does your schedule look over the next few weeks?

Best, Kevin

Hello Captain Rose,

I hope this note finds you well. I was told that you would be a good person to speak with regarding facial recognition technology for your investigators.

Very simply, I'm looking show you how other law enforcement agencies are using Veritone to identify suspects and close cases faster.

Would you have some time next week to see our application in action?

Best, Kevin

Subject:	Re: Veritone Call - Rapidly Identify New Suspects

Hello Katherine

I'm looking to connect with you to show you how other agencies are using Veirtone's AI solution to quickly identify suspects in video and image evidence.

Veritone automatically matches faces to arrest records and booking databases. Unlike other facial recognition tools, Veritone allows investigators to save unknown faces and match them to open cases, increasing departmental efficiency.

If you're looking to reduce investigation time, let's schedule 20 minutes to see Veritone in action.

When works best?

Best,

Kevin

www.veritone.com

Dear Katherine,

Imagine if you could quickly search images and surveillance video for potential suspects against arrest records and BOLO bulletins?

Veritone analyzes your suspect's face and compares it to your Known Offender and Person of Interest databases to help you identify suspects faster.

Let me know when you have 10 minutes this week or if there is someone else on your team who would be better to speak with.

Best,
Kevin

Hi Katherine,

As you know, identifying suspects quickly in crime scene video is critical.

Veritone IDentify automatically searches and finds your "needle in the haystack" by matching known offenders to surveillance footage instantly.

Let's set up a time where we can discuss how other agencies like yours have used Veritone to close more cases.

When works best for you?

Regards,
Kevin

Hello Katherine,

Identifying suspects from crimes caught on camera is a time-consuming and arduous task for investigators, detectives, and crime analysts.

Veritone expedites this process by automatically searching a suspect's face across known offender databases to quickly match persons of interest with arrest records.

In short, Veritone can help you close cases more efficiently.

When do you have 20 minutes next week to discuss?

Best,
Kevin

Subject:	Force Multiplier on every corner

Eric,

On the heels of Wi-Fiber's BEST OF SHOW award at CES, our revolutionary Intelli-Platform™ has garnered the attention of law enforcement offices as a rapid **Force Multiplier** at a fraction of the price of additional new hires. Our device, a straight replacement to traditional street lamps, incorporates high speed wireless connectivity and surveillance which includes:

- 4K cameras with facial recognition & LPR
- Microphones
- Two way speakers
- Gunshot and glass-break sensors

Best of all, with built in wireless connectivity, power is the only requirement - allowing your team to install our device on any and every street corner with no additional internet or power lines.

When could you accommodate a 30 minute window to discuss our core capabilities and the most cost effective force multiplier available?

Dear Joseph,

Siloed IT systems can't provide the big-picture insights city and public safety leaders need to ensure the highest levels of public safety. To deliver the most comprehensive and proactive protection, public safety agencies need to aggregate and analyze data from multiple systems.

Join us August 14 at 11:00am PT/2:00pm ET to hear how the City of Chicago, the second largest police department in the United States, leveraged an integrated Strategic Decision Support Center to aggregate public safety data and reduce overall violent crime by 24 percent and shootings by 70 percent. You'll hear how:

- A Strategic Decision Support Center can aggregate and analyze data from multiple systems — computer-aided dispatch, video surveillance, automatic license plate recognition, gunshot detection, facial recognition, etc. — to facilitate faster decision-making and reduce crime.
- Leveraging GIS location and visual information can help responders share information instantly with field personnel to enable them to work more effectively and safely.
- A Strategic Decision Support Center can provide public safety agencies a better way to use existing intelligence scattered across multiple departments.

Featured Speakers:

- Jonathan Lewin, Chief, Bureau of Technical Services, Chicago Police Department
- Bob Carter, Business Development Manager for Smarter and Safer Cities, Genetec
- Otto Doll - Moderator, Senior Fellow, Center for Digital Government

You can register at no cost here! Can't attend on August 14? Register anyway to receive updates for access to the on demand recording.

Please feel free to share this information with any colleagues you feel would be interested in learning more, and do let me know if you have any questions!

Thank you,

Olivia Gratton

Subject: Facial Recognition Follow Up

FaceFirst is a leading provider of face recognition to law enforcement (40 in CA alone) and I am sending over some information about how FaceFirst is currently helping our law enforcement partners.

Our technology will scan your VMS at a rate of 25,000,000 pictures a second with very high accuracy, and send automatic alerts to the correct persons upon seeing a match.

- Our team made this 2-minute video that does a great job of showing how our system can help officers in the field. You can also go to our website, www. Facefirst.com/law enforcement, to see the video.
- I'm also sending over a whitepaper that gives a more in-depth look at mobile, surveillance and forensic use cases. It also breaks down exactly how much time and resources we can typically save departments.

We have dozens of law enforcement agencies using our system, and we are expecting that number to increase exponentially over the next year. If our solution looks compelling, we'd like to offer you a 45-minute WebEx demonstration that can truly show off FaceFirst's capabilities. Would you like to schedule a demo?

Regards,

Paul

Subject:	Facial Recognition Demo Request

FaceFirst is the leading provider of facial recognition technology and Real Time Crime Intelligence to law enforcement and we recently received testimonials from our clients, here are 3 for your review.

1: I just wanted to send a positive note on two events regarding the new Face First program. Three tablets were upgraded with the test program last week. The very next day we used it on our first call. The residence we were in was a known flop house with several occupants. One male ran out the back into the garage to hide but was located and detained. The male was photographed and entered into the TACIDS system. A 99.97% match was provided on the male. A records check of the name and DOB provided the male had an active felony warrant and was a parolee at large.

2: Wanted to drop you a note on how the facial recognition worked yesterday. Right after our weekly investigations' meeting I was assisting other detectives on a follow up of a kidnapping / robbery. We ended up at the suspect's house and contacted numerous people. I contacted two people who were not involved but were in the suspect's apartment. One had ID and had a PAL warrant and was immediately arrested. The other person, a female, had no ID and gave the name of a real person in AZ. It was obvious this female had been arrested before but the record's check showed no hits of a criminal record. At this point in the investigation she was not a suspect in the kidnapping and we did not have anything else on her we knew she was lying about her identity and were running out of detention time. I sent you the photo of her and within a couple of minutes we had her identified and learned she was a parolee at large. She was arrested for the warrant and identity theft...very helpful tool.

5: I can say that I use it constantly, almost every contact. Recently I was able to identify a non- verbal/uncooperative 5150. This helped me determine that I was dealing with a mental health situation and not a 415/11550.

FaceFirst is the only platform that will compare a live image to a watch list of thousands-millions of images and generate a real-time notification of a match to the correct personnel in seconds. In fact our technology will scan 25 million photographs a second with a very high degree of accuracy.

[Here is a link to a video we produced that shows an officer using face recognition in the field.](#)

We would like to offer you a 45 minute WebEx demonstration and show you the capabilities of this remarkable technology and why so many law enforcement agencies are using facial recognition as a layer of safety and security and communication for their officers in the field.

Regards,

Paul

Hi Trevor,

I hope you are well. Just circling back on my last note regarding accelerated suspect identification using facial recognition technology.

When are you available for a brief call to discuss how Veritone uses artificial intelligence to enhance your investigations?

For more information, please refer to our recent whitepaper pertaining to known offender-related cases and digital evidence analysis.

Best Regards,

Randa Akeel
